The next page is the detection string page. Here, you can add multiple types of detection strings.

In this case, I'm going to add a Sigma string. I've labeled the name Sigma string. I'm going to select the Sigma pattern type, and then I'm going to paste in my pattern.

Note that any pattern used other than a STIX pattern will not be validated, and if a STIX pattern is selected, then the STIX pattern builder will be available to you.

Once the pattern is added, you select when it was first seen, the time zone, last observed and time zone, and then how many instances you have seen of this occur so far, and you add it to your cart.
