The first page of the Guided Report is the WHO page. You can enter both target and attacker identities on the WHO page.

The default tab is the target tab, and you can select either an individual or an organization and enter a name. If a name is not entered, one will be autogenerated for reference. You can also add contact information for the target; target phone number and target email. Once you have added that information you can add it to your cart.

You can also add the same information for the attacker, and you select their motivation if you know it. Then, you can add them to your cart.

You will see on this page that you now have two items in the cart on this page the target and the attacker.

You have two items in your total cart. This cart will move with you throughout the guided report process. And, on the left-side menu you will also see that there are two objects added on the WHO page.
